**! Important: Please Read Before Installation**

This luminaire is intended for installation in accordance with local codes and the National Electric Code (NEC). Failure to adhere to these codes and instructions may result in serious injury, property damage and void the warranty.

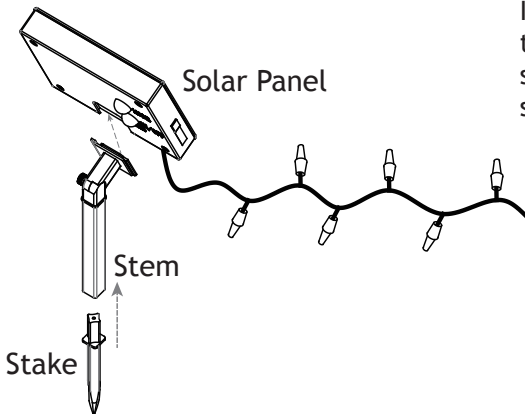

These instructions do not intend to cover all variations in installation, operation maintenance or mounting situations.

**1 Charge Solar Panel**

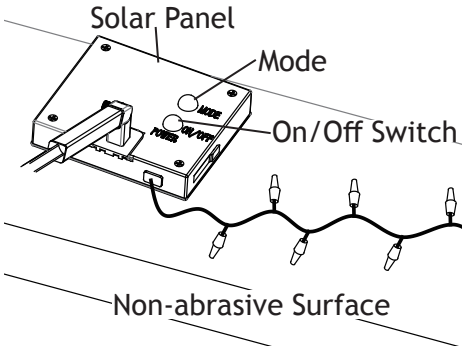

When you receive your product you may not want to wait for the sunlight to charge it. You can utilize the included USB cable to charge it as well. Otherwise, continue forward using the next steps and let the sun charge the unit.

**2 Install Stem and Stake**

Insert the stem into the back of the solar panel and attach the stake onto the bottom of the stem.

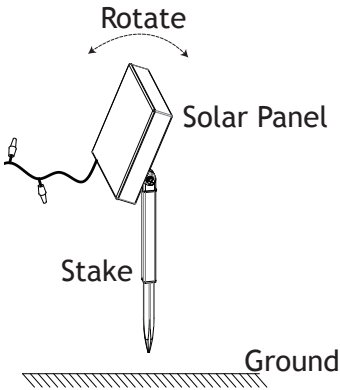

### 3 Test Solar Panel

Press the ON/OFF switch on the back of the solar panel while it is face down on a non-abrasive surface.

These solar lights have different settings, to change the settings use the MODE button on the back.

### 4 Install & Adjust Solar Panel Direction

Push the stake into the ground. Rotate the solar panel to the proper direction and lock it into place using the set screw.

### 5 Install the Lighting

Choose your location for installation and run the light wire around or through that location. Just be sure that you leave enough room for the panel to be in the sun at all times throughout day. Installing the panel in a dim or shady location can prevent your lights from fully charging.
