

1 Building your new Foot Stomper Tool

Thread all three rods together as pictured. The rods will face with the male ends downward, and the stake holder will tighten at the very bottom. Tighten each area where indicated with a wrench, so that the tool is firmly secured together in one piece. Place the handle bar on the top of the Upper Rod. Thread the Bolt onto the uppermost Rod and hand tighten until snug; then use a wrench to secure it firmly in place as well.

2 Using your new Foot Stomper Stake Installer

- Find your desired installation area for your staked landscape lighting fixture.
- Slide the neck of the fixture with the stake into the slot on the Stake Holder of the tool. The Stake Holder should fit most standard sized stakes.
- Be sure your fixture is level and apply pressure on the foot stomper's pegs to press the fixture firmly into the soil.
- Remove the installation tool from the fixture with stake carefully by sliding it back and away from the fixture neck.
