

# AMP® Low Voltage Landscape Lighting Solarium Solar Spotlight - ASAL-1025-B-BZ

## Product Description

The AMP® Solarium Solar Spotlight has a solid brass construction and includes premium-grade components with water-tight features that enable this fixture to last a lifetime. On a full charge, this fixture will last 4-8 hours each night starting at over 200 lumens and gradually diminishing from there. These lumen values are tested in a state of the art laboratory and are verifiably accurate. A lot of lumen values in the market are not accurate and therefore are a false comparison. These fixtures need to be seen to be believed and are the best and brightest solar fixtures ever created. A comparison with any other solar fixture makes this product the clear winner. It features two adjustable knuckles that have teeth for maximum adjustability for aiming light as well as the panel, for maximum absorption. It also has all wiring internal to prevent it from being destroyed or ripped out during routine garden maintenance or trimming. Water-tight features (IP65 rating) include potted knuckles, a pressure fit gasket, water shedding lens, and sealed On/Off button. The photocell is built into the mono-crystalline solar panel, so your fixtures come on at sundown without the need to go out and turn them on. The replaceable battery pack carries a 2 Year Warranty while the fixture itself carries a Lifetime Warranty just like all of our other brass fixtures. This brass solar fixture is sure to outlast any traditional solar fixture on the market today.

## Product Dimensions

## Specifications

- ▶ With a full charge, this fixture will last 4-8 hours each night starting at over 200 lumens and gradually diminishing from there.
- ▶ Water shedding lens that keeps water from pooling on the faceplate.
